

Current-Player Sentinel & Downstream Intrinsic Diagnostic

Research-only evaluation of the fixed position-routed Forecast contender against the frozen PR #147 I1 baseline and universal A2+C+D benchmark.

DECISION

The fixed position-routed Forecast is defensible on the sentinel board. No immediate separate Intrinsic/Shapley defect audit is warranted. Management authorization is required before any implementation or promotion.

What changed

Coordinate	Year 1	Years 2-3	Status
Frozen I1	Governed live 2026	Frozen PR #147 I1	Reference only
Universal	Same governed live 2026	A2+C+D for all positions	Benchmark
Fixed route	Same governed live 2026	QB: A2+C+D; RB/WR/TE: A2+D	Recommended contender

Controls held fixed

Full 335-player governed universe; frozen lineup legality; 2,048 Shapley permutations; seeds 20260915/16/17; h=3; 0.85 future-year discount; C=0.25; no named-player tuning; and no 2026 outcomes in Year 2/3 fitting.

Authority boundary

This report records research evidence only. It does not modify PR #147, main, production models, deployment state, lineup rules, Shapley rules, or the Intrinsic Constitution.

Headline read

The frozen baseline's principal sentinel failure was Forecast-side: Aaron Rodgers retained 99.5% Year 2 and 98.3% Year 3 persistence at age 41.75. The fixed route reduces those values to 66.5% and 36.8%. Young elite players retain strong future value, while Christian McCaffrey receives credible aging attenuation.

Sentinel board

Intrinsic values include governed Year 1 plus discounted Year 2 and Year 3 Shapley values. Delta compares each challenger with frozen I1.

Player	Pos / age	Frozen I1	Universal	Fixed route	Route delta
Aaron Rodgers	QB / 41.8	441.10	328.43	328.53	-112.57 (-25.5%)
Sam Darnold	QB / 28.2	499.48	520.67	520.83	+21.35 (+4.3%)
Bijan Robinson	RB / 23.6	557.88	587.75	588.03	+30.14 (+5.4%)
Jahmyr Gibbs	RB / 23.5	534.93	565.43	566.34	+31.41 (+5.9%)
Puka Nacua	WR / 24.3	466.61	501.99	500.26	+33.64 (+7.2%)
Christian McCaffrey	RB / 29.2	472.33	446.39	447.87	-24.47 (-5.2%)
Brock Bowers	TE / 22.7	252.50	267.03	267.71	+15.21 (+6.0%)
Trey McBride	TE / 25.8	280.28	296.87	298.98	+18.70 (+6.7%)

Routed Intrinsic ordering

Rank	Player	Intrinsic	Read
1	Bijan Robinson	588.03	Young elite RB retains premium multi-year value
2	Jahmyr Gibbs	566.34	Young elite RB remains near top of board
3	Sam Darnold	520.83	Prime QB scarcity adds value, but does not dominate young elites
4	Puka Nacua	500.26	Prime elite WR remains ahead of older/TE sentinels
5	Christian McCaffrey	447.87	Elite Year 1, appropriately attenuated future
6	Aaron Rodgers	328.53	Extreme-age survival defect corrected
7	Trey McBride	298.98	Prime TE remains economically coherent
8	Brock Bowers	267.71	Young TE gains future production value

KEY ORDERING

Bijan Robinson (588.03) and Jahmyr Gibbs (566.34) remain above Sam Darnold (520.83), who remains above Puka Nacua (500.26). The challenged cross-position inversion is not present in the final routed Intrinsic board.

Forecast decomposition

Persistence is the probability of remaining active. Anticipated points are unconditional future points under each coordinate.

Quarterbacks

Player	Coord	Y2 survive	Y2 pts	Y3 survive	Y3 pts
Aaron Rodgers	Frozen	99.5%	190.37	98.3%	177.72
	Routed	66.5%	116.22	36.8%	59.60
Sam Darnold	Frozen	99.7%	211.74	98.5%	185.42
	Routed	95.2%	218.63	90.2%	194.60

Elite non-QBs

Player	Coord	Y2 survive	Y2 pts	Y3 survive	Y3 pts
Bijan Robinson	Frozen	98.5%	154.36	95.4%	126.46
	Routed	95.4%	168.32	90.5%	144.92
Jahmyr Gibbs	Frozen	98.6%	153.20	95.2%	126.05
	Routed	95.8%	168.78	91.3%	145.19
Puka Nacua	Frozen	98.2%	143.33	95.4%	118.21
	Routed	93.5%	160.27	87.1%	138.47
Christian McCaffrey	Frozen	97.5%	122.24	97.6%	103.35
	Routed	80.2%	108.65	52.7%	61.04
Brock Bowers	Frozen	99.6%	114.24	96.7%	102.37
	Routed	96.5%	121.59	94.5%	109.84
Trey McBride	Frozen	98.9%	111.59	96.6%	94.80
	Routed	93.7%	119.75	87.6%	105.22

Downstream Intrinsic / Shapley check

The table separates each routed Intrinsic into Year 1 and discounted future-year Shapley contributions. This tests whether reasonable Forecast changes become economically incoherent downstream.

Player	Year 1	Year 2 raw	Y2 x 0.85	Year 3 raw	Y3 x 0.85^2	Total
Aaron Rodgers	222.35	86.05	73.15	45.72	33.04	328.53
Sam Darnold	262.07	170.00	144.50	158.14	114.26	520.83
Bijan Robinson	392.06	130.25	110.71	118.00	85.26	588.03
Jahmyr Gibbs	369.30	131.44	111.72	118.09	85.32	566.34
Puka Nacua	314.22	123.58	105.04	112.10	80.99	500.26
Christian McCaffrey	346.98	79.01	67.16	46.68	33.72	447.87
Brock Bowers	137.22	83.86	71.28	81.95	59.21	267.71
Trey McBride	171.74	82.94	70.50	78.53	56.74	298.98

Finding

No new downstream defect is exposed. Darnold's value is materially supported by governed Year 1 and frozen QB deployment scarcity, but the final total does not overtake the young elite RBs or Puka. The forecast-to-Shapley transmission is internally consistent for the eight sentinels under the frozen rules.

Routing sensitivity

Player	Routed minus universal Intrinsic
Bijan Robinson	+0.28
Jahmyr Gibbs	+0.90
Puka Nacua	-1.74
Christian McCaffrey	+1.47
Brock Bowers	+0.68
Trey McBride	+2.11

The routed-vs-universal differences are small on this board. Routing does not reverse the sentinel conclusions; it remains a historically motivated architecture choice rather than a named-player correction.

Management conclusion & evidence

CONCLUSION

Forecast issue resolved at the research layer; no immediate downstream Intrinsic audit indicated. The exact next step is a management Forecast-selection and implementation-authorization decision for the fixed position route.

What each component contributed

Component	Observed sentinel contribution
A2 - exact age	Dominant correction to extreme-age QB persistence; materially lowers Rodgers Year 2/3 survival.
C - role memory	Small additional QB adjustment; retained only for QB in the fixed route.
D - tail calibration	Redistributes positive-state outcomes and supports credible elite/aging future production.
Shapley / Intrinsic	Transmits the Forecast without a sentinel-level economic inversion under frozen rules.

Reproducibility record

Item	Value

Historical cutoff	target outcomes through 2025; source rows through 2022

Data caveat

The live Year 1 projections are intentionally identical across all coordinates and are not reopened by this diagnostic. The report evaluates future-state resolution and downstream transmission only.

Stop condition

No promotion, production implementation, PR #147 edit, main-branch edit, merge, deployment, or authority change was performed.

Appendix: broader 335-player context

The diagnostic was calculated over all 335 governed players. The summary below uses every player. The detailed sample is deterministic: the top 10 routed Intrinsic values within each position (40 players total). It is corroborating context, not a new selection or tuning set.

Position	Players	Median route delta	10th percentile	90th percentile	Positive / negative
QB	61	+3.50	-44.60	+42.21	34 / 27
RB	88	-0.50	-17.76	+20.83	42 / 46
WR	122	+0.33	-21.84	+20.84	61 / 61
TE	64	-3.90	-15.85	+15.76	28 / 36

QB: top 10 routed Intrinsic

Player	Frozen I1	Universal	Fixed route	Route delta
Josh Allen	665.59	707.62	707.80	+42.21
Jalen Hurts	583.12	620.41	620.60	+37.49
Drake Maye	595.87	615.02	615.21	+19.34
Lamar Jackson	561.12	604.34	604.49	+43.38
Bo Nix	570.08	601.96	602.17	+32.08
Caleb Williams	584.36	595.03	595.20	+10.83
Justin Herbert	535.83	559.69	559.86	+24.03
Trevor Lawrence	513.68	549.76	549.95	+36.27
Patrick Mahomes	545.47	548.83	549.01	+3.54
Baker Mayfield	521.94	544.20	544.37	+22.44

RB: top 10 routed Intrinsic

Player	Frozen I1	Universal	Fixed route	Route delta
Bijan Robinson	557.88	587.75	588.03	+30.14
Jahmyr Gibbs	534.93	565.43	566.34	+31.41
Jonathan Taylor	456.75	474.47	474.65	+17.91
