Replacement Identity / Materialization Coordinate

New governed evidence coordinate - data engineering only

PASS - 335 ROWS CONSTRUCTED, HASHED, RELOADED, AND AUDITED

This is a new replacement coordinate created after exact recovery of the original bridge failed. It is not the recovered original. The frozen routed + M1a + two-prior-season Forecast remains unchanged and was not executed.

Gate	Result
Frozen population	335/335 exact Year-1 row identities
Deterministic identity	300 matched; 35 unmatched; 0 ambiguous
Accepted-ID uniqueness	300 unique GSIS IDs; no collisions
Two-prior PIT coverage	199 covered; explicit reason on every uncovered row
Fresh-read reload	PASS - identical row and population hashes

Coordinate result

Mapping status	Count	Mapping
DIRECT_ID	73	Existing Year-1 GSIS validated against provider identity
CANONICAL_CROSSID	0	No qualifying pre-task repository cross-ID source existed
EXACT_NAME_POSITION	227	Reverse-unique exact normalized name + compatible position
AMBIGUOUS	0	No tie was manually resolved
UNMATCHED	35	Retained explicitly; no exact provider candidate

Row-material SHA-256

1803ee0200b8d1d39dfd719934bd683765727bef997f2a1f1ee44d2a6444af56

PIT coverage

Status	Rows
Two genuine prior seasons	199
Missing 2023 only	46
Missing 2024 only	1
No 2024 or 2023 history	54
Identity unmatched	35

Frozen rules and evidence

Identity rule order was fixed before output inspection: validated existing GSIS; qualifying pre-task repository canonical cross-ID; then exact normalized name + compatible position. Exact-name acceptance required one provider candidate, reverse uniqueness on the current side, and no accepted GSIS collision.

Forbidden tie-breaks were not used

No fuzzy-name score, production similarity, age/experience similarity, fantasy points, current ranking, sentinel status, manual preference, Forecast output, or Shapley output resolved any identity.

Frozen provider coordinate

Source	Asset ID and timestamp	Raw hash
NFLverse players.csv	Asset 572597132; updated 2026-09-18 12:34:30Z	801d5fec...59b579b6
NFLverse roster_2025.csv	Asset 373640814; updated 2026-03-14 07:33:08Z	531ee5de...fb4d04ad
Governed identity subset	916 roster-limited skill-player records	Full hash in manifest

Raw upstream files are not redistributed. The exact governed identity fields used by the matcher are persisted with source URLs, asset IDs, timestamps, and raw hashes.

Identity validation

All 73 direct IDs passed name and position validation. All 227 exact-name matches had exactly one provider candidate. Accepted GSIS IDs are unique. As an independent post-hoc check only, the provider's Sleeper cross-ID agreed for 300/300 accepted matches with zero disagreements; it was not used to accept matches.

Frozen PIT methodology

The 2023 age/state residual uses only seasons before 2023; the 2024 residual uses only seasons before 2024. Position/state and position/age-band/state reference cells use the already-frozen fallback and support rules. No selected-Forecast parameter was estimated.

Parity gate	Result
Persisted 2022 rows compared	619/619
Maximum residual-z difference	4.440892098500626e-16
Residual-scope mismatches	0
Missing rebuilt rows	0
Status	PASS

No-history handling

A mapped player without both genuine seasons receives neutral continuous inputs with prior2_coverage=0 and a specific missing-history reason. An unmatched identity remains IDENTITY_UNMATCHED and is never silently converted into ordinary no-history.

Eight-sentinel identity audit

Identity and history availability only - no sentinel Forecast was computed or compared.

Player	Field	ID	Y2	Y3	Forecast
Aaron Rodgers	DIRECT_ID	00-0023459	Yes	Yes	Covered
Sam Darnold	DIRECT_ID	00-0034869	Yes	Yes	Covered
Bijan Robinson	EXACT_NAME_POSITION	00-0038542	Yes	Yes	Covered
Jahmyr Gibbs	EXACT_NAME_POSITION	00-0039139	Yes	Yes	Covered
Puka Nacua	EXACT_NAME_POSITION	00-0039075	Yes	Yes	Covered
Christian McCaffrey	DIRECT_ID	00-0033280	Yes	Yes	Covered
Brock Bowers	EXACT_NAME_POSITION	00-0039338	Yes	No	Missing 2023
Trey McBride	EXACT_NAME_POSITION	00-0037744	Yes	Yes	Covered

Management decision now required

This task reports completeness; it does not decide downstream treatment. Management must decide whether 300 deterministic identities and 199 fully covered prior-two histories are sufficient before authorizing any Y2/Y3 materialization.

Persisted reproducibility package

File	Description
replacement_identity_materialization_coordinate.json	Row-complete 335-player crosswalk and PIT inputs
provider_identity_snapshot.json	Exact governed identity fields and provider provenance
manifest.json	Input/output hashes, frozen rules, independence declaration
collision_unmatched_audit.json	All 35 unmatched rows and uniqueness audits
sentinel_identity_audit.json	Eight-sentinel identity/history status
pit_coverage_audit.json	Coverage counts and frozen-method parity
reload_verification.json	Fresh-read 335-row and hash verification
RECONSTRUCTION.md	Exact input hashes, command, and expected results

STOP. Do not materialize the 335-player Y2/Y3 Forecast board, run sentinel Forecast parity, run Intrinsic/Shapley, tune, refit, implement, promote, merge, or deploy under this authority.
